An End-to-End Vulnerability Management Solution

ManageEngine Vulnerability Manager Plus is prioritization-focused vulnerability management software for enterprises that offers built-in patching. It delivers comprehensive coverage, continual visibility, risk-based assessment, and integral remediation of vulnerabilities and misconfigurations from a single console.

- Protect every endpoint—workstations, laptops, servers, virtual machines, web servers, and databases.
- Gain unified, continuous visibility of your distributed IT irrespective of endpoints' whereabouts.
- Automatically detect vulnerabilities, misconfigurations, risky software, and much more.
- Look beyond CVSS scores. Prioritize vulnerabilities based on age, exploitability, and impact.
- Patch vulnerabilities and fix misconfigurations with the click of a button.
- Swiftly spot zero-day vulnerabilities and apply mitigation work-arounds.
- Automate and customize patching for Windows, macOS, and Linux based on your organization's needs.
- Gain a bird's-eye view of your security posture with near real-time dashboards.

Detects vulnerabilities in more than **820** applications

Extensive coverage of over **22K** vulnerabilities (CVEs)

Assesses for over **120** security misconfigurations

Supports high-profile vulnerabilities within **24** hours of disclosure

Supports **18** languages

Scales to **50,000** computers

One agent. One interface. Extensive security features!

Point solutions have become a thing of the past due to their complexities and excessive costs. Vulnerability Manager Plus' integrated approach not only facilitates detection and resolution of vulnerabilities, misconfigurations, and risky software from a single console but also radically eliminates the need for multiple agents, disparity in data transferred between solutions, and potential delay in remediation. All of this enhances the effectiveness of your overall vulnerability management program.

- Vulnerability assessment
- Patch management
- Security configuration management
- Web server hardening
- High-risk software audit
- Active port audit

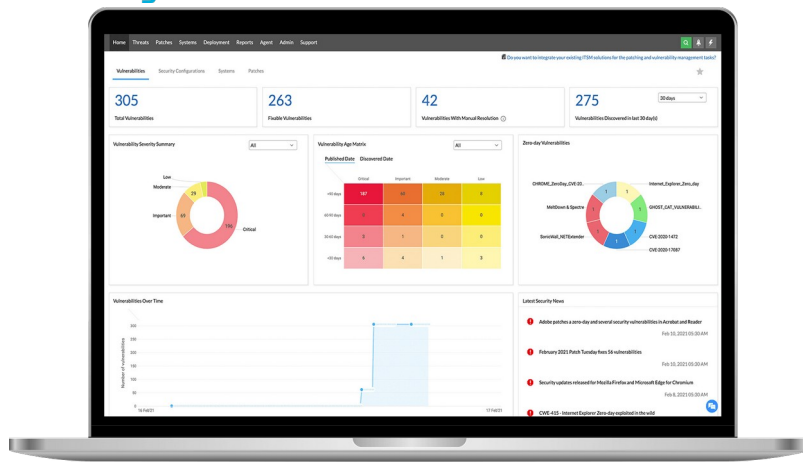

Vulnerability assessment

- Continually monitor your endpoints for known or emerging vulnerabilities.
- Analyze vulnerability risk, and focus on what's urgent.

- See exploit availability for every vulnerability.
- Remediate within seconds with automatically correlated patches.
- Mitigate zero-day or publicly disclosed vulnerabilities.

[Explore 30 days of free, unlimited access now!](#)

Trusted by customers globally

Empower your distributed workforce with safe working conditions.

Starts at \$695/year for 100 computers
